

WP1: Evaluation techniques & Climate model experiments

Objective: Provide new evaluation tools and climate simulation data for the cloud feedback analyses

Deliverables:

D1.1: Final version of COSP software – July 2011 (Latest version: November 2013)

D1.2: Final versions of CALIPSO-PARASOL observational analysis product and of MODIS simulator - January 2011

D1.3: ESM versions with COSP software – April 2011

D1.4: Final output of ESM simulations – September 2011

D1.5: Final versions of model evaluation packages – September 2011

D1.6: Reprocessed version of EUCLIPSE model data products for long-term archiving within WDCC beyond the runtime of the project – June 2014

D1.4: Final output of ESM simulations

Update of CMIP model CFMIP output

D1.5: Evaluation Toolkit

Simulator package

- The CFMIP Observation Simulator Package - <http://cfmip.metoffice.com/COSP.html>

Correlation between cloud properties

- 2D histogram of instantaneous cloud reflectance (PARASOL) and cloud fraction (CALIPSO):

ftp://ftp.climserv.ipsl.polytechnique.fr/cfmip/goccp/MULTI-SENSORS/CRef/ref_cf.m

- Relationship between instantaneous cloud reflectance (PARASOL) and vertical profile of cloud fraction (CALIPSO):

ftp://ftp.climserv.ipsl.polytechnique.fr/cfmip/goccp/MULTI-SENSORS/CRef/cf3d_ref.m

- Joint height-SR histogram of Scattering Ratio (CALIPSO):

ftp://ftp.climserv.ipsl.polytechnique.fr/cfmip/goccp/SR_histo/SR_histo.m

Clustering methods

- Mean Cloud Top Pressure (CTP) - Cloud Optical Depth (τ) Weather States (ISCCP):

<http://isccp.giss.nasa.gov/climanal5.html>

- Cloud Regime Error Metric: <http://cfmip.metoffice.com/codes.html>

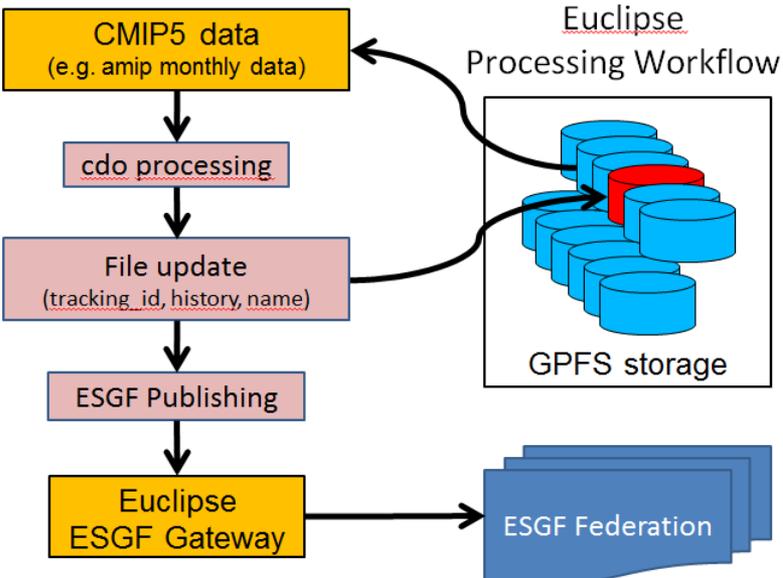

Compositing methods

- Climatology of Midlatitude Storminess: <http://gcss-dime.giss.nasa.gov/mcms/mcms.html>

- Tropical ElNino Southern Oscillation Anomaly Database

<http://gcss-dime.giss.nasa.gov/ARRA/arra.html>

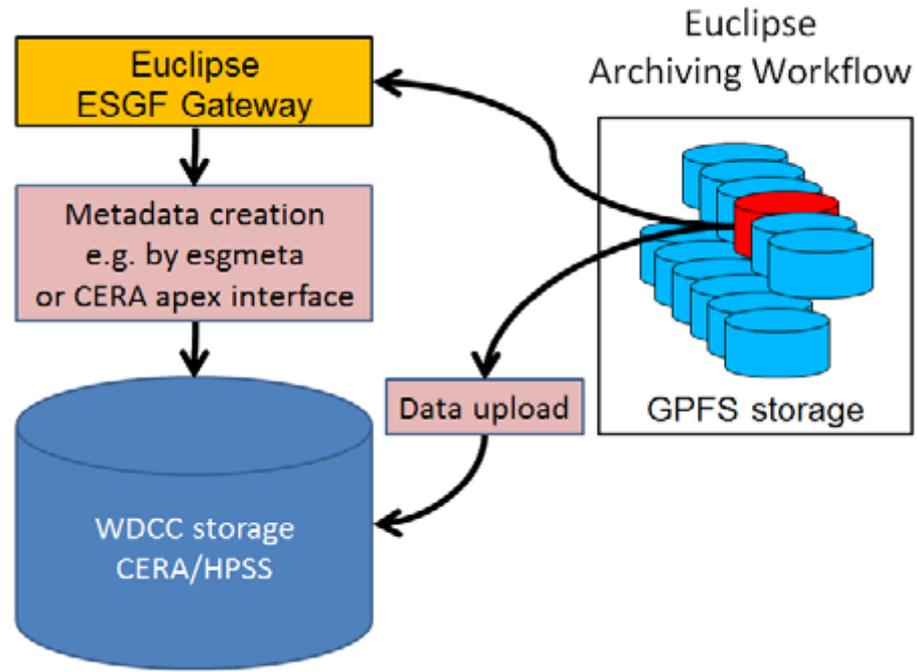

D1.6: Reprocessed EUCLIPSE model data products for long-term archiving

Processed Euclipse data have been archived in WDCC. The following steps have been performed:

- Processing with new tracking_id
- Publishing the datasets into the Euclipse1 ESGF index node
- Writing CERA XML metadata derived from the ESGF metadata
- Uploading these XML metadata into the CERA
- Uploading the data itself to the tape archive

Processed EUCLIPSE data include cdo processing, COOKIE and SPOOKIE output

Main issues in implementing WP1 tasks:

Most tasks are ongoing while proposal rules require the fulfillment of specific deadlines

D1.1,D1.3: COSP completion and application
